1. Introduction

With this XML Standard-Import-Interface we offer you the opportunity to import and present your properties on e-domizil.

For the import we need three files:

- master data: **objects.xml**;
- prices, seasons, extra costs, discounts: **prices.xml**;
- availabilities: **availability.xml**.

The size of the files is limited to a maximum of 1.000 properties per file.

If you want to export more than 1.000 properties please provide several files with the following names:

objects_1ofN.xml
objects_2ofN.xml
...
objects_NofN.xml

The data has to be UTF-8 encoded.

Please provide the data on your ftp server or via link, ideally in a zipped format.
Please consider the definite and static names of the files (see above).

The update routines can be scheduled according to your requirements. Please let us know how often and when you update your information.

In the following guide the structure of the above mentioned files will be described.

2. Master data (objects.xml)

In the xml file for the master data the properties (units) will be provided in the following format:

Picture 1: structure objects.xml

The different properties „units“ will be listed under the main element „units“. There can only be one „unit“ element per property. The main element „unit“ has the following **attributes**:

unitownerid	number of the provider (will be provided by e-domizil)
internalunitid	property number of the provider
internalunitid2	property number of the provider2 (optional)

The combination of **internalunitid** and **internalunitd2** has to be definite.

container always: „property_view“
language default language of the text data; default is German, if the attribute is empty.

One unit contains the following **elements**:

property_type property type, allowed values: 1 = holiday home, 2 =apartment, 3 = holiday park.
title name of the property; there has to be at least one name per property; the element has an attribute „language“; if there no attribute „language“, the default language will be used.
occupancies element with attributes „**normal**“ and „**maximum**“ – standard and maximum occupation (number of persons).
location description information about location (detailed description see 2.1) description of the property; the element has an attribute „language“; if there no attribute „language“, the default language will be used.
features property features (detailed description see 2.2).
pictures pictures, videos and ground plan (detailed description see 2.3).
link link to the property (optional)

2.1 Location (element „location“)

Picture 2: element location (scheme)

```

<location>
  <country iso_code="DE">Deutschland</country>
  <zip_code>61350</zip_code>
  <city>Bad Homburg v.d.H. testt</city>
  <street>Anemonenweg</street>
  <houenumber>999</houenumber>
  <geocodes latitude="51.0911" longitude="7.94005" type="1" />
</location>

```

Picture 3: element location (example)

The element „**location**“ contains the following elements and attributes (see picture 2, example 3):

element **country** country with the attribute **iso_code**

element zip_code	(two-digit country code corr. ISO 3166); zip code;
element city	city name;
element street	street;
element houzenumber	house number;
element geocodes	geo coordinates for the localisation of the property or the city, the property is situated in. The element has the following attributes: latitude - WGS84 format; longitude - WGS84 format; type – value for the differentiation between property related (value = 1) and city related geo information (value = 0).

2.2 Property features (element „features“)

The element „**features**“ contains several „**attribute**“-elements (see picture 4).

Picture 4: element features (scheme)

Elements and attributes of the „**attribute**“-element:

attribute id	unique attribute ID; reference to table ref_attributes.xml (see chapter 5)
attribute subcategory	„number of the room“ – for attributes which describe more than one room, this attribute will be used as number of the room (e.g. bath room 1, bath room 2 etc.).
attribute language	language for text attributes; if there no attribute „language“, the default language will be used.
element lookup	with attribute id - applies to “lookup”-attributes; reference to table ref_attributes.xml (see chapter 5)

The elements of the attribute have to be filled according to the attribute type. We distinguish seven attribute types:

- 1 – Text short texts, not longer than 255 characters (depending on the language).
example:

```
<attribute id="306" language="de">Testrr_Räume_DE</attribute>
<attribute id="306" language="en">Testrr_Räume_EN</attribute>
```

- | | |
|-------------|---|
| 2 – Integer | number, values are limited (maximum and minimum), unit has to be remarked (km). |
|-------------|---|

Detailed description see appendix 1 or
ref_attributes.xml (see chapter 5)

examples:

„number of bedrooms“:

```
<attribute id="261">1</attribute>
```

„living area“ (100 m²):

```
<attribute id="125">100</attribute>
```

3 – Real

numeric data types.

example „distance“:

```
<attribute id="202">0.3</attribute>
```

4 – Yes/No

possible values: „j“, „n“.

example „lift available“:

```
<attribute id="257">j</attribute>
```

5 – Lookup/Single

data will be saved in“lookup”-element; there can
only be one value per attribute.

example „pets allowed“:

```
<attribute id="220">
  <lookup id="263" />
</attribute>
```

6 – Lookup/Multiple

same as type 5, but several values are allowed.
example „property type (historical building (266),
holiday home(496))“:

```
<attribute id="113">
  <lookup id="266" />
  <lookup id="496" />
</attribute>
```

7 – Memo

texts longer than 255 characters.

2.3 Pictures, videos and ground plans (element „pictures“)

The element „**pictures**“ is used for transmitting pictures, videos and ground plans.

Picture 5: element pictures (scheme)

The element „**pictures**“ contains several „**picture**“-elements (see picture 5).

attribute „**attribute_no**“

unique ID for the attribute for the description of the
picture / video type with the following possible
values:

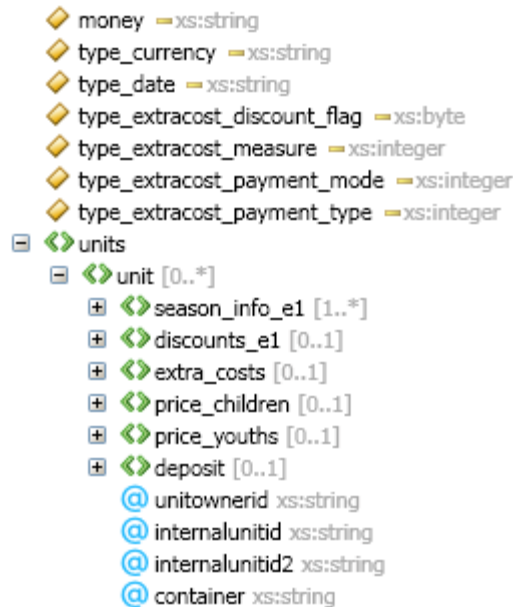

234– Exterior view (small) (picture);

attribute „url“
element „comment“
attribute „language“

235 – Exterior view (picture);
236 – Interior view (picture);
242 – Picture sketch (ground plan);
from 243 to 247 – picture 1 – 5;
from 327 to 341 – picture 6 – 20;
from 391 to 470 – picture 21 – 100;
384 – video.
URL to the picture.
comments for the pictures (optional).
language of the comment.

3. Prices (prices.xml)

In the xml file for the prices the price information for the properties will be provided in the following format:

Picture 6: structure prices.xml

In picture 6 you can see the main elements of the prices.xml. Just like the objects.xml the prices.xml has one „units“-element which contains several „unit“-elements. Every „unit“-element contains several price information of one property.

The main element „unit“ has the following **attributes**:

unitownerid	number of the provider (will be provided by e-domizil)
internalunitid	property number of the provider
internalunitid2	property number of the provider2 (optional)

The combination of **internalunitid** and **internalunitid2** has to be definite.

container	always: „prices“
------------------	------------------

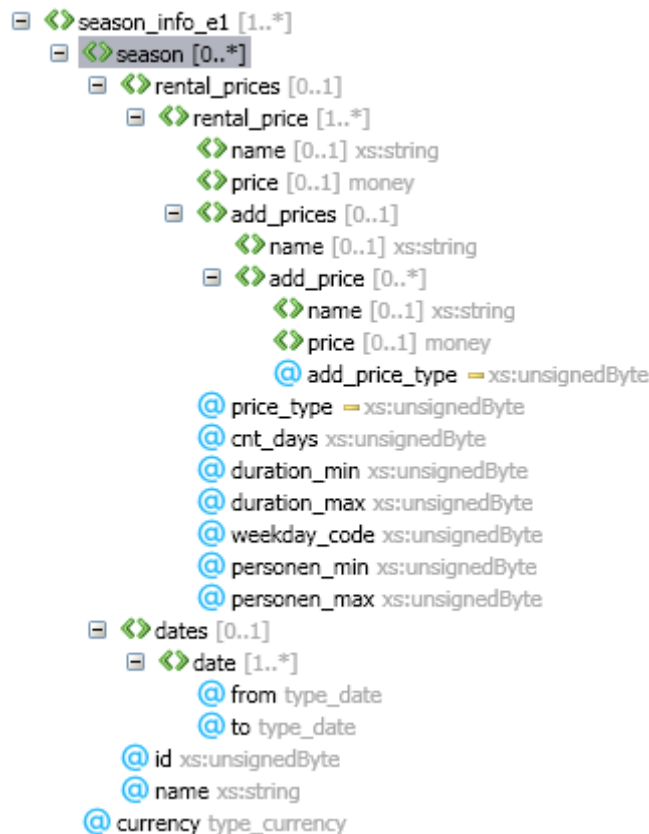

One unit contains the following **elements** with the corresponding **attributes**:

season_info_e1	seasons and prices
discounts_e1	discounts
extra_costs	extra costs
price_children	discounts for children
	ok - true or false – indicates, whether a children discount is offered or not
	age – age until the children discount is valid
price_youths	discounts for young persons
	ok - true or false – indicates, whether a young person discount is offered or not
	age - age until the young person discount is valid

deposit value of the deposit (attribute **price**) with currency (attribute **currency**)

3.1 Seasons and prices (element „season_info_e1“)

There has to be at least one „season_info_e1“-element per property (see picture 7). The element has one single attribute „currency“. You can use several season_info_e1-elements per property, but with only one currency. The next element „season“ groups the seasons with the same price (price definition).

Picture 7: element season_info_e1 (scheme)

Attributes of the „season“-element:

id unique season code (from 1 to x (number of different seasons))

name name of the season (optional)

Elements of the „season“-element:

dates list of all season periods the price is valid for – consists of at least one „date“-element with the attributes
from – start of the season period (format dd.mm.yyyy);
to – end of the season period (format dd.mm.yyyy).

rental_prices price information for one season – in the element „rental_price“ the single prices are defined.

The attributes of the element „**rental_price**“ describe all features:

price_type	price type; there are currently 4 types existing: 0 – duration type and arrival day type will be considered in the price check; the duration type is independent of the season (desparture day could also be out of the season) 2 – like 0, but the duration type is valid per season (arrival and departure day lie in the season). 4 – weekly bookable. duration type – per journey. 6 – weekly bookable. duration type – per season.
cnt_days	number of days, the price is valid for;
duration_min	minimum travel duration for the price (has to be bigger or equal cnt_days sein);
duration_max	maximum travel duration for the price;
weekday_code	arrival day (bit mask). Monday – bit 1, Tuesday – bit 2, ... Sunday – bit 7; example type = 22 is 0010110 – arrival day on Tuesday, Wednesday and Friday;
personen_min	minimum number of people; if 0 there is no limit;
personen_max	maximum number of people; if 0 there is no limit.

The amount should be saved in the „**price**“ element.

The element „**name**“ serves as comment.

To show additional fees you can use the element „**add_prices**“.

This element consists of the element „**add_price**“ with the attribute:

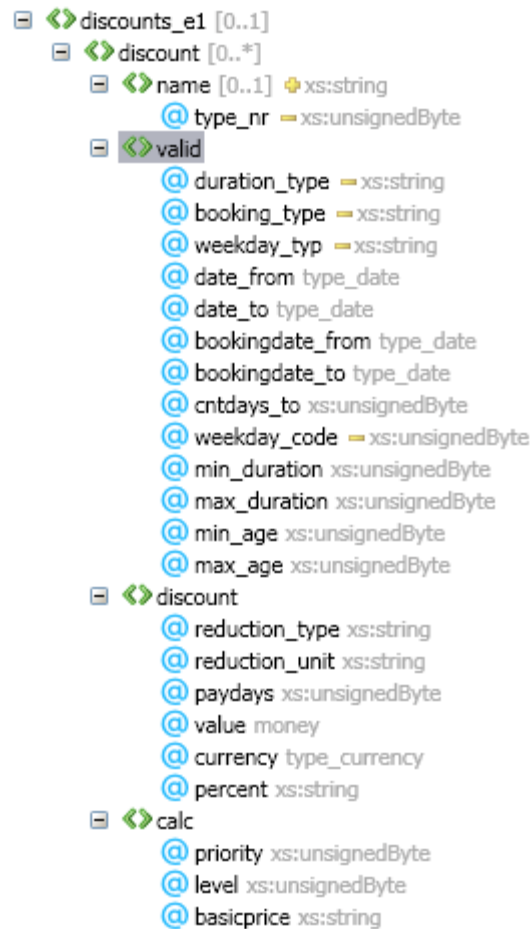

add_price_type	type of the additional fee: 11 – additional fee per person (more than standard occupation) 12 - additional fee per child (more than standard occupation) 13 - additional fee per young person (more than standard occupation) 14 – extension day.
-----------------------	---

and the elements:

price	amount of the additional fee
name	name of the additional fee

3.2 Discounts (element „discounts_e1“)

The element „discounts_e1“ contains a list of all allowed discounts.

Picture 8: element discounts_e1 (scheme)

It is only allowed to create one element „discounts_e1“ per property.
 For every discount there is only one element „discount“. The data will be divided into four elements. (see picture 8).

name	name of the discount with the attribute type_nr ; this attribute can have the following values: 1 – last minute discount 2 – time discount 3 – travel x days, pay y days 4 – minimum duration 5 – age discount 6 – additional fee
valid	the element "valid" describes when the discount is valid.
duration_type	contains the following values "AN", "AB", "AA": AN – arrival day lies in the period "date_from", "date_to". AB – departure day lies in the period "date_from", "date_to".

	<p>AA – arrival and departure day lie in the period "date_from", "date_to".</p> <p>null – arrival and departure day are irrelevant.</p>
booking_type	<p>contains the following values "VB", "BI", "TA".</p> <p>VB – booking lies in a special period ("bookingdate_from", "bookingdate_to").</p> <p>BI – booking should be done until a specific date. ("bookingdate_to").</p> <p>TA – booking should be done until x days before arrival. ("cntdays_to").</p> <p>null – booking time is irrelevant.</p>
weekday_typ	<p>if the value "WT" exists, the arrival has to be on a specific weekday ("weekday_code"). null – weekday is irrelevant.</p>
date_from	travel date from (format dd.mm.yyyy);
date_to	travel date to (format dd.mm.yyyy);
bookingdate_from	booking date from (format dd.mm.yyyy);
bookingdate_to	booking date to (format dd.mm.yyyy);
cntdays_to	booking date is smaller than arrival date – number of days (cntdays_to);
weekday_code	<p>values from 1 to 127 bitmask:</p> <p>bit "1" = 1 – Monday is arrival day.</p> <p>bit "2" = 1 – Tuesday is arrival day.</p> <p>bit "3" = 1 – Wednesday is arrival day.</p> <p>...</p> <p>bit "7" = 1 – Sunday is arrival day.</p> <p>Example: weekdaycode = 35 – Monday, Tuesday and Saturday are arrival days;</p>
min_duration	minimum travel duration – for discounts for special durations;
max_duration	maximum travel duration;
min_age	minimum age – for "senior"- discounts;
max_age	maximum age – for "children"- discounts;
discount	element "discount" describes how high and how the discounts have to be calculated.
reduction_type	<p>reduction type. values "T", "P" and "W":</p> <p>T – has to be calculated in days (14 = 12). (min_duration = paydays).</p> <p>P - %. (percent).</p> <p>W – fixed values;</p>
reduction_unit	<p>reduction unit.</p> <p>O – per property.</p> <p>B – per booking.</p> <p>P – per person;</p>
paydays	number of days that have to be paid;
value	value of the discount;
currency	currency code (optional);
percent	percentage.

calc	element "calc" describes, how discounts should be used.
priority	priority;
level	level;
basicprice	basis for the calculation;

On one level the discount with the highest priority is used. Der "basicprice"-value shows, if the discount has to be calculated on the original price (O) or the price that has already been calculated with discounts (B).

3.3 Extra costs (element „extra_costs“)

The element „extra_costs“ describes the extra costs of one property.

Picture 9: element extra_costs (scheme)

As displayed in picture 9 only one „extra_costs“ element is allowed. This element describes several extra costs. There is one **extra_cost** element per extra cost position.

The „extra_cost“ element has the following attributes:

type	ID of the extra cost type; list of available types:
	1 – general
	2 – electricity
	3 – heating
	4 – bed linen
	5 – towels
	6 – visitor's tax
	7 – final cleaning
	8 – other costs (can be used for extra costs, that cannot be displayed with the existing types)
	12 – pet
	13 – water

	14 – wood for chimney
	15 – cot for children
	16 – gas
	17 – cot for adults
	18 – air condition
	19 – parking facilities
	20 – telephone
	21 – internet
	22 – sauna
	23 – intermediate cleaning
payment_type	where the extra costs have to be paid
	0 – payment on spot
	1 – payment at booking (extra costs will be billed with the rental price)
measure	unit for the extra cost type
	0 – not defined
	1 – per property and day
	2 – per property and week
	3 – per person and day
	4 – per person and week
	5 – one-time per property
	6 – one-time per person
payment_mode	payment method for extra cost type
	1 – included in price
	2 – to be brought by tenant
	3 – to be done by tenant
	4 – on consumption
	5 – costs amounting to
	6 – available
	7 – for rent at a price of
discount_flag	indicates if there is a children or young people discount;
	values: "1" = "yes";
child_discount	height of the children discount;
youth_discount	height of the young people discount;
optional	if the value is "Y", this extra cost type is optional;
valid_from	start of the validation period for the extra cost type (format dd.mm.yyyy);
valid_till	end of the validation period for the extra cost type (format dd.mm.yyyy);
original	irrelevant.
currency	currency;
language	irrelevant.
Elemente:	
price	value;
price_min	irrelevant;
price_max	irrelevant;

Element **name** with the attribute „**language**“ – name of the extra cost type with language; if the language attribute is empty, German language will be used.

The element name cannot be empty, but only the names for extra cost type=8 are taken into consideration. For all other types the standard names from e-domizil will be used.

4. Availabilities (availability.xml)

In the xml file the availability information for the properties will be provided in the following format:

Picture 10: structure availability.xml

```

<units>
  <unit unitownerid="8323" internalunitid="1264" internalunitid2="" container="availability">
    <availability_year>
      <availability year="2012" start="BBBBBBBBBBBBBBBBBOOOOOOBBBBBBBBBBBBBBBBBOOOOOOBBBBBBBBBBBBB"
      <availability year="2013" start="OOOOBBBBBBBBBBBBAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA"
      <availability year="2014" start="AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA"
    </availability_year>
  </unit>
  <unit unitownerid="8323" internalunitid="126701" internalunitid2="" container="availability">
    <availability_year>
      <availability year="2012" start="BBBBBBBBBBBBBBBBBOOOOOOBBBBBBBBBBBBBBBBBOOOOOOBBBBBBBBBBBBB"
      <availability year="2013" start="OOOOBBBBBBBBBBBBAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA"
      <availability year="2014" start="AAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA"
    </availability_year>
  </unit>
</units>
  
```

Picture 11: availability.xml (example)

The format is described in the XSD-scheme and the xml files have to validated with it.

As picture 10 shows, the xml file starts with the **units**-element.

The „**units**“-element contains one or more „**unit**“ – elements. There can only be one element per property – detailed vacancy information per property.

It is important that there are availabilities for the next three years per property. Data for other periods will not be used.

Attributes of the „unit“-element:

attributes:

unitownerid number of the provider (will be provided by e-domizil)

internalunitid property number of the provider

internalunitid2 property number of the provider2 (optional)

The combination of **internalunitid** and **internalunitid2** has to be definite.

container always: „availability“

elements:

availability_year grouping for „availability“ elements.

availability vacancy per year.

The element „**availability**“ has two necessary attributes:

year – calendar year, relevant for the data string with vacancy information

start – data string with vacancy information (1 character = 1 day).
Maximum length 365 (366 for leap years).

Possible values (characters) for the data string:

A - available,

B - available, arrival day,

V - occupied

6. Changes

Created: 23.03.2012

7. Appendix

Appendix 1: Overview of attributes incl. lookups and types

Id	lookup Id	name/lookup name	type	name of the type	minimum value	maximum value	unit
113		Property type	6	Lookup/Multiple			
	199	Farmhouse					
	238	Holiday home					
	239	Holiday apartment in one or multi-family house					
	265	Stately Manor/Villa					
	266	Historical building					
	301	Multistorey holiday home/maisonette					
	330	Penthouse holiday apartment					
	351	Castle					
	492	Villa					
	493	Holiday apartment in a double bungalow					
	495	Luxury holiday home					
	496	Holiday home					
	497	Holiday apartment in a two family house					
	498	Holiday apartment in a villa					
	499	Holiday apartment in a farmhouse					
	506	Holiday apartment					
	509	Apartment in a holiday resort					
	510	Apartment in a bungalow park					
	511	Holiday home in a bungalow park					
	527	Hut					
	528	Chalet					
	529	Row house					
	530	Twin house					
	534	Manor					
	565	Holiday home in a holiday resort					
	569	Part of a house					
115		Holiday category	6	Lookup/Multiple			
	187	Active holiday					
	200	Beauty and wellness					
	235	Family and children					
	296	Culture and creativity					
	312	Nature					
	345	Peace and relaxation					
	378	Sport					
	380	Language and studies					
	382	Near to the city					
117		Exterior overall impression	5	Lookup/Single			
	320	New or recently renovated					

	340	Well maintained					
	357	Maintained					
	452	Minor deficiencies					
	453	Needs to be renovated					
	507	Extremely charming holiday home					
118		Overall impression furnishing and features	5	Lookup/Single			
	255	Functional and well maintained, minor wear and tear					
	299	Luxurious and carefully selected					
	332	Tasteful and more than just functional					
	420	High-quality, no deficiencies					
	423	Simple Furnishing					
	502	Especially charming holiday home					
	566	Functional and convinient for a holiday					
	567	Well and comfortably furnished					
	568	Upscale, comfortable furnishing					
119		Let since	2	Integer		2050	
120		Last external renovation	2	Integer		2050	
121		Last internal renovation	2	Integer		2050	
124		Number of living rooms	2	Integer		10	
125		Living area	2	Integer		1000	m²
